CATALOGUE

**THE ROMAN GLASS VESSELS ASSEMBLAGE. THE CHURCH STREET SEWER, YORK**

---

---

For the analysis of this assemblage it was expected that the extant glass fragments from the Church Street sewer excavation, now housed in the archive of the Yorkshire Museum, would be studied with reference to Charlesworth report of the glass (1976, nos.32-58, 15-18, figs.12-14). As the work progressed, however, it became apparent that there was more in the archive than that which had been recorded by Charlesworth. Furthermore, and more seriously, almost half of the fragments that Charlesworth had discussed were missing from the museum (*cf* Appendix B (iii)). It was therefore decided to amalgamate the Charlesworth report with the study and analysis of the extant assemblage. This was supplemented, where present, by the associated context data from the archive in the York Archaeological Trust, and the Small Finds accession book in the Archaeological Resource Centre, York. The resulting catalogue is that of a small assemblage of a total of 69 extant fragments, as well as a further 13 fragments recorded by Charlesworth yet apparently absent from the archive.

This catalogue must therefore be seen as a compromise as well as an approximation of numbers of fragments, since it was hindered by the lack of detail in the Charlesworth's report for the now absent fragments. It is highly probable, for instance, that the base ring dc33 is not from a bath flask, since no bath flasks with base rings are known from British contexts. It is therefore also possible that numbers dc34, dc38-dc41 listed beneath the general discussion on bath flasks (*op.cit.*, 15-16) have likewise no association with such vessels. On occasion, as a result of this, it has been necessary to catalogue these, together with other absent fragments including those for which no detail of colour has been offered by Charlesworth, either in the 'miscellaneous' or 'miscellaneous, *no colour recorded*' category.

This lack of detail, together with the fact that less than half the known original assemblage had been catalogued, has, on occasion, also made it difficult to ascertain whether certain of the catalogued fragment were indeed those which were present in the extant assemblage; it is a moot point, for instance, whether dc34, recorded as 'body fragment with a trail; green' is the writer's catalogue number 51; similarly it is not possible to know whether dc39-41 is the writer's 50-1 and 53. The numbers of glass fragments used in the analysis might therefore be viewed as approximate. That there are so few bath flasks in the assemblage, and so few bottles, suggests that there was more glass in the original archaeological record of the sewer than the total now suggested by Charlesworth's record and the archive (Price pers.comm.).

### The present catalogue

In order to allow the present catalogue for Appendix B to be used without hindrance - by bracketed references or foot notes for Charlesworth's record - during the compilation the writer has underlined the text and data which has been copied or occasionally re-worded from Charlesworth's published work. Where the fragment is no longer present for analysis, and the writer has used the published illustrations to suggest dimensions of the fragment or to make observations, these have been placed within brackets. The numbers assigned to the fragments by Charlesworth, for her report, are written with her initials 'dc' preceding them, and both number and initials underlined; in one instance MacGregor's catalogue has been consulted, (1976, no.67, 22) for the glass rod fragment, 67, and therefore the initials 'am' have preceded his catalogue number. Thus, for example, Charlesworth's fragment, which is numbered in her report as 37 (and no longer available for study), and which is the writer's number 28, will be entered in this catalogue as:

28      dc37 Fragment of rim, neck, and handle, [bath flask]. Greenish. Flat infolded rim. [Handle attached to rim and neck].
