The Roman Fort at South Shields (Arbeia)  
A Study in the Spatial Patterning of the Faunal Remains

Thesis submitted for the Degree  
of  
Master of Arts  
March 1996

This project was designed to interpret the patterning found in the spatial distribution of the deposition of faunal debris at South Shields Roman fort. The results were compared with those of Halstead *et. al.* (1978) and Halstead and Hodder (1982), as they were the only similar studies for a Roman site. They suggested that the spatial patterning of bone waste could be linked to discard after specific activities such as slaughter and butchery, the preparation of food and the consumption of food. An attempt was made to locate these areas in which these specific activities took place within the fort at South Shields.

To achieve this aim it was felt necessary look at the evidence for animal husbandry practices and, in particular, to check for chronological variation in the size and conformation of the sheep and cattle. Also to ascertain if there were any changes in the representation of the three main domestic species (cattle, sheep/goat and pig) through time from c AD 205 to AD 369. As well examine the evidence for butchery practices, predominantly the dismemberment of cattle, to see whether or not there were any chronological and/or cultural changes.

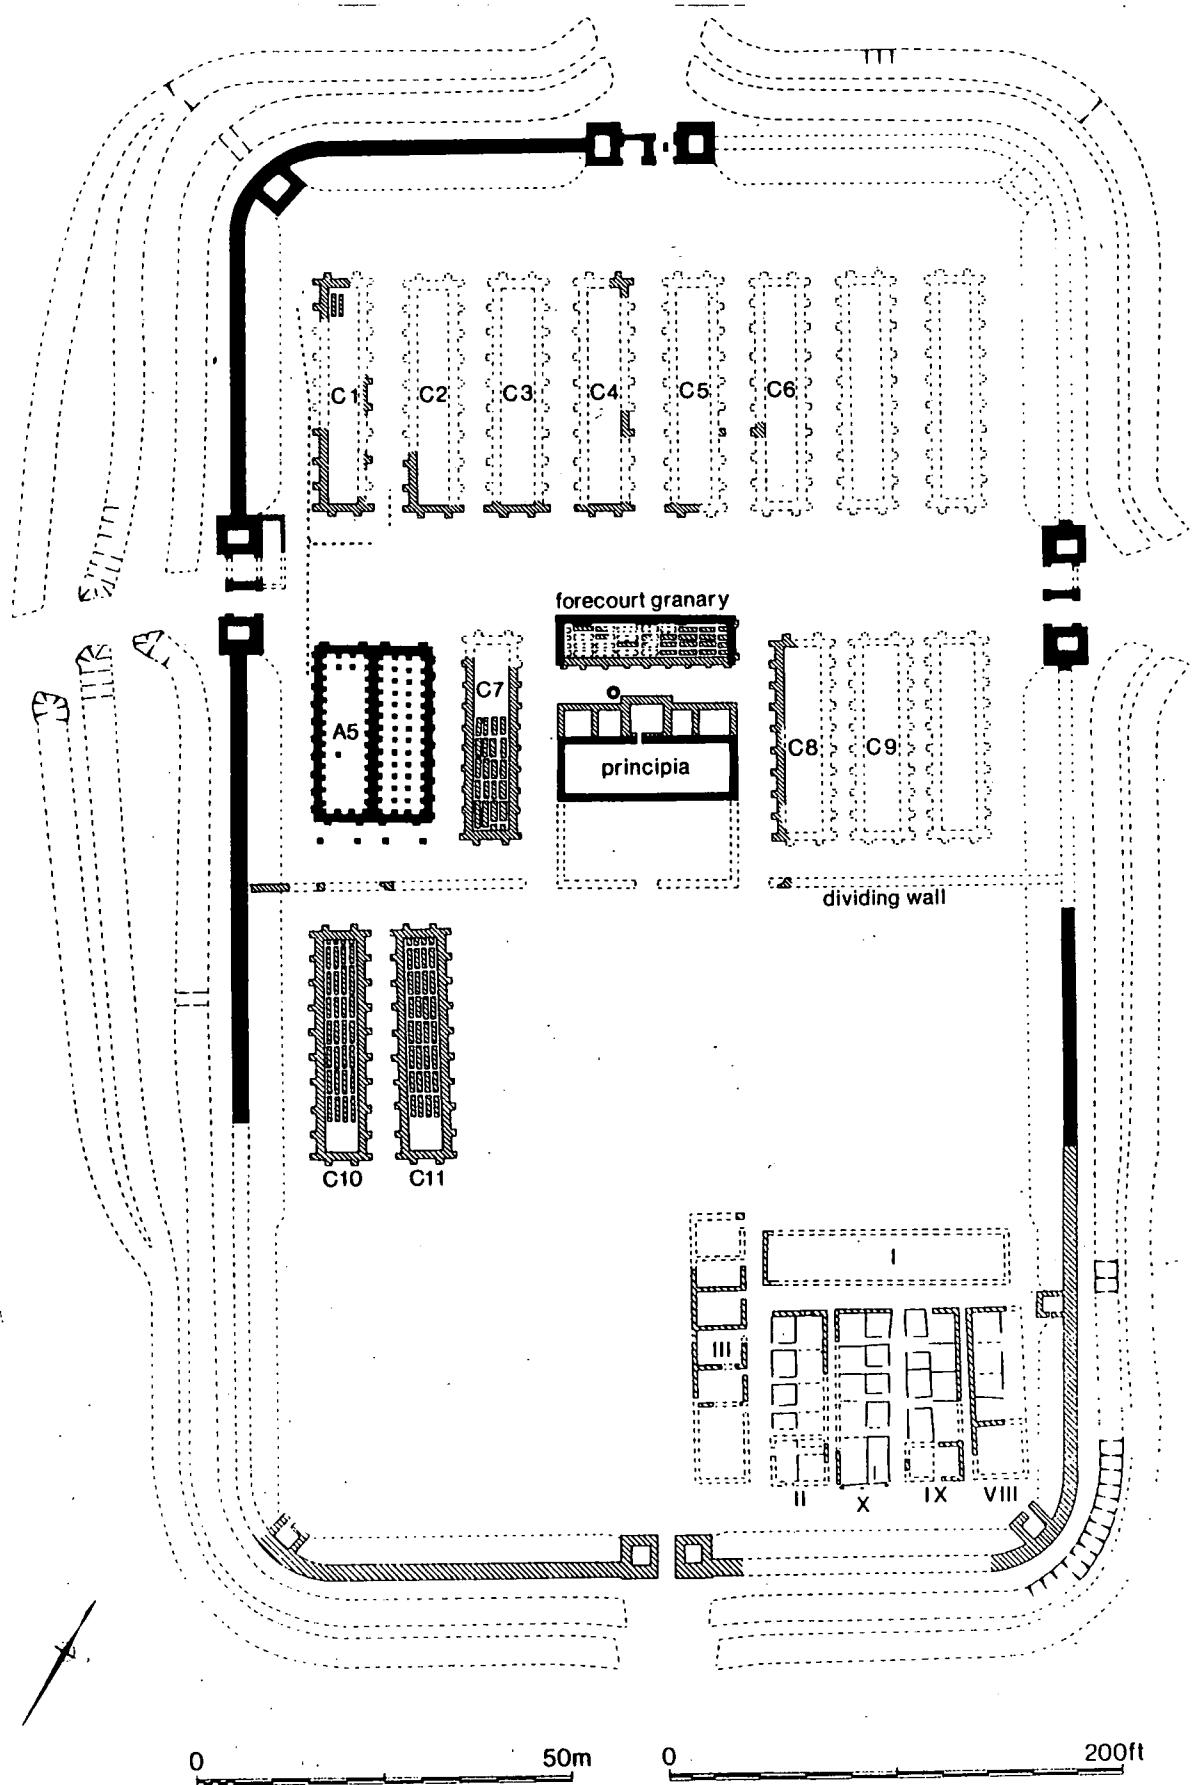

# The Roman Fort at South Shields (Arbeia)

## A Study in the Spatial Patterning of the Faunal Remains

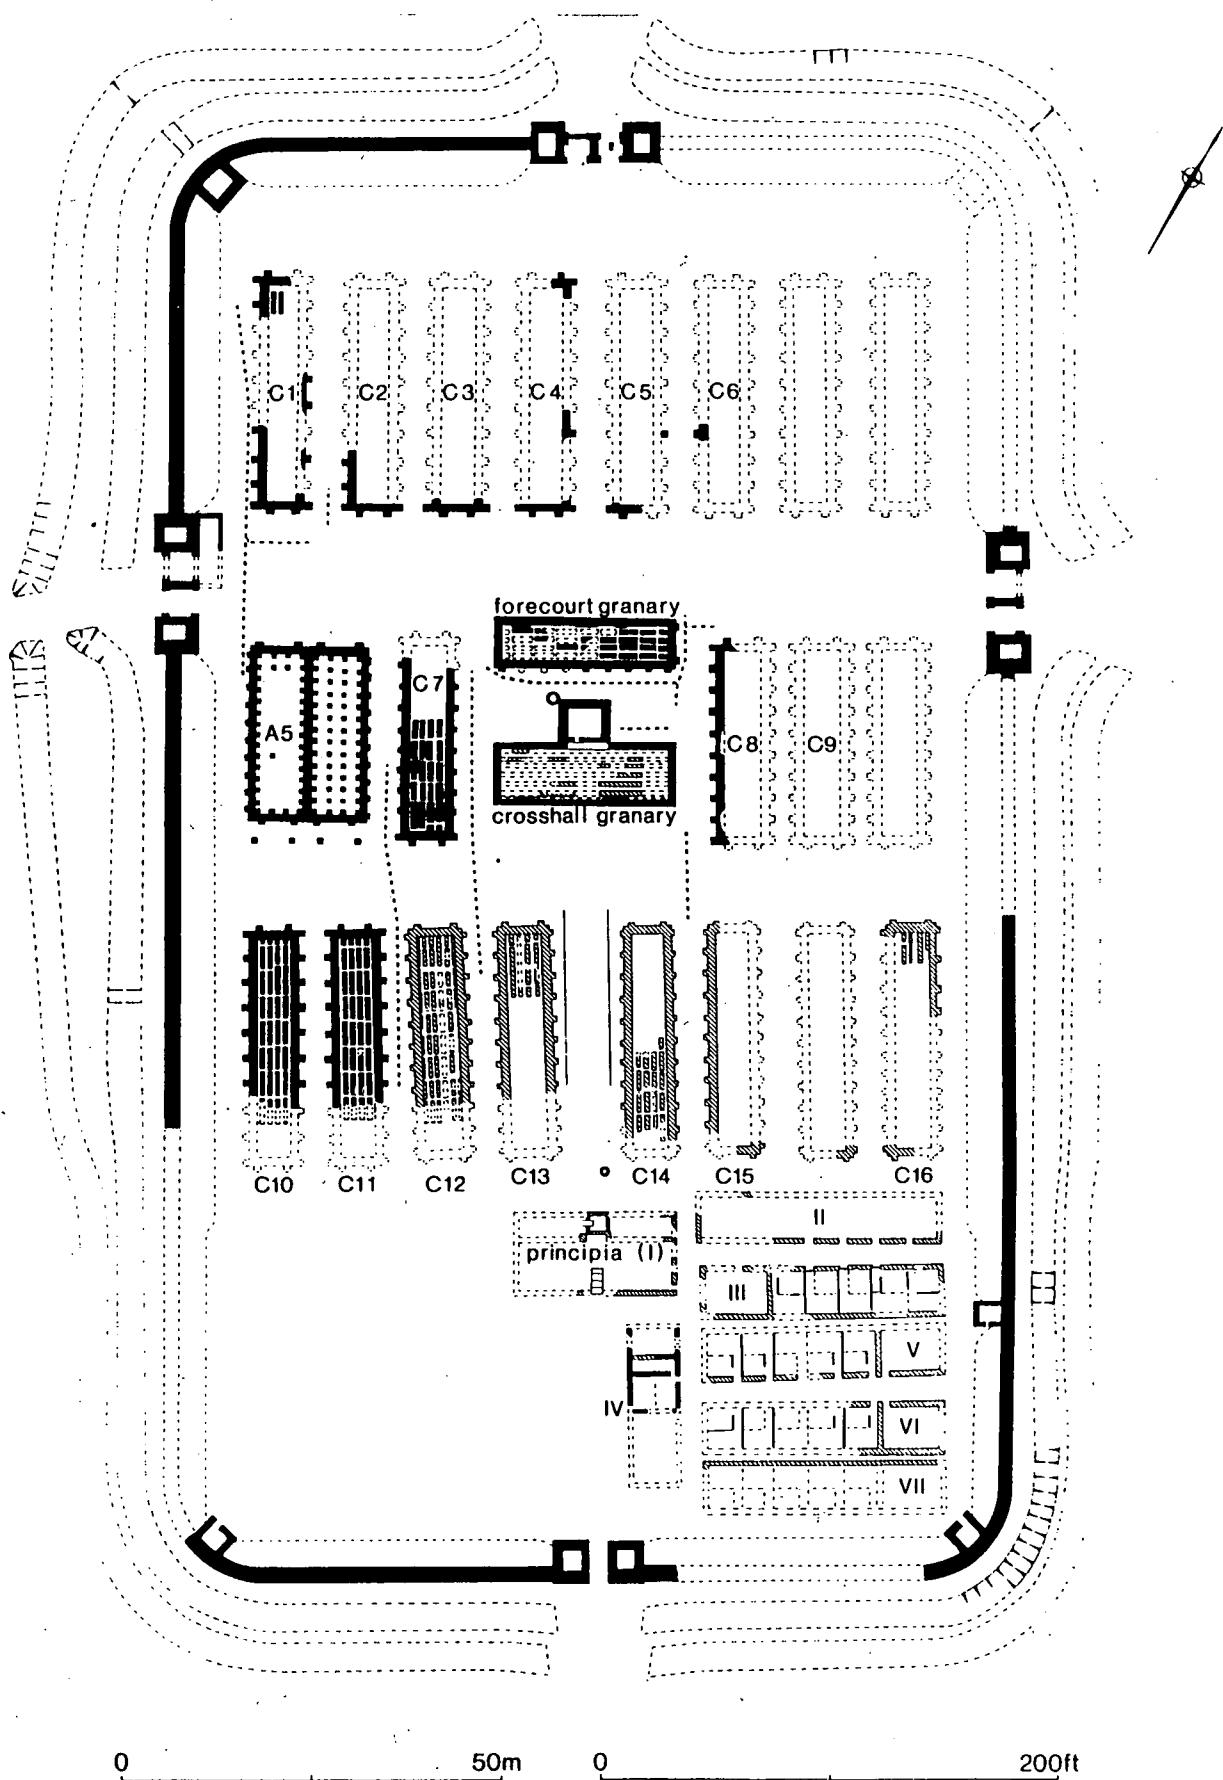

### CONTENTS Vol. 2

- plan 1 The supply base of Period 5 (*c 205 - 7 to 222 - 35*)
- plan 2 The supply base of Period 6 (*222 - 35 to late third or early fourth century*)
- plan 3 The fort of Period 7 (*late third or early fourth century*)
- figure 1 Relative frequencies of cattle skeletal elements for all locations
- figure 2 Relative frequencies of sheep/goat skeletal elements for all locations
- figure 3 Relative frequencies of pig skeletal elements for all locations
- figures 4 & 5 Relative frequencies of cattle skeletal element zones for all locations
- figures 6 & 7 Relative frequencies of sheep/goat skeletal element zones for all locations
- figures 8 & 9 Relative frequencies of pig skeletal element zones for all locations
- figure 10 Percentages of the main domestics all locations period 6 & 7a
- figure 11 Cattle mandible wear stages
- figure 12 Cattle metacarpal distal measurements
- figure 13 Cattle metacarpal verticilli measurements
- figure 14 Cattle metatarsal distal measurements
- figure 15 Cattle metatarsal verticilli measurements
- figure 16 Horn core dorso-basal diameter mesurements
- figure 17 Horn core ora-aboral diameter mesurements
- figure 18 Sheep/goat mandible wear stages
- figure 19 pig mandible wear stages
- figure 20 Methods of cutting up beef forequarters
- figure 21 Methods of cutting up beef hindquarters
- figure 22 Ripping lines for removal of hide
- figure 23 Modern beef cuts
- figures 24 to 27 Percentages of butchered bone by location
- figures 28 to 30 Percentages of butchered bone to bone fragments by location
- figure 31 Accumulative percentages of bone recorded
- figures 32 to 76 Body part frequencies for the 3 domesticates by location
- figures 77 to 91 Diagrammatic frequncy for location
- figures 92 to 185 Skeletal element zone frequencies by location
- figures 186 to 203 Percentages of the main domesticates by location
- figure 204 Phase comparisons of the main domesticates
- table 1 Fragment counts for the species present
- table 2 List of bone measurements
- table 3 Cattle fusion data
- table 4 Horn core measurements

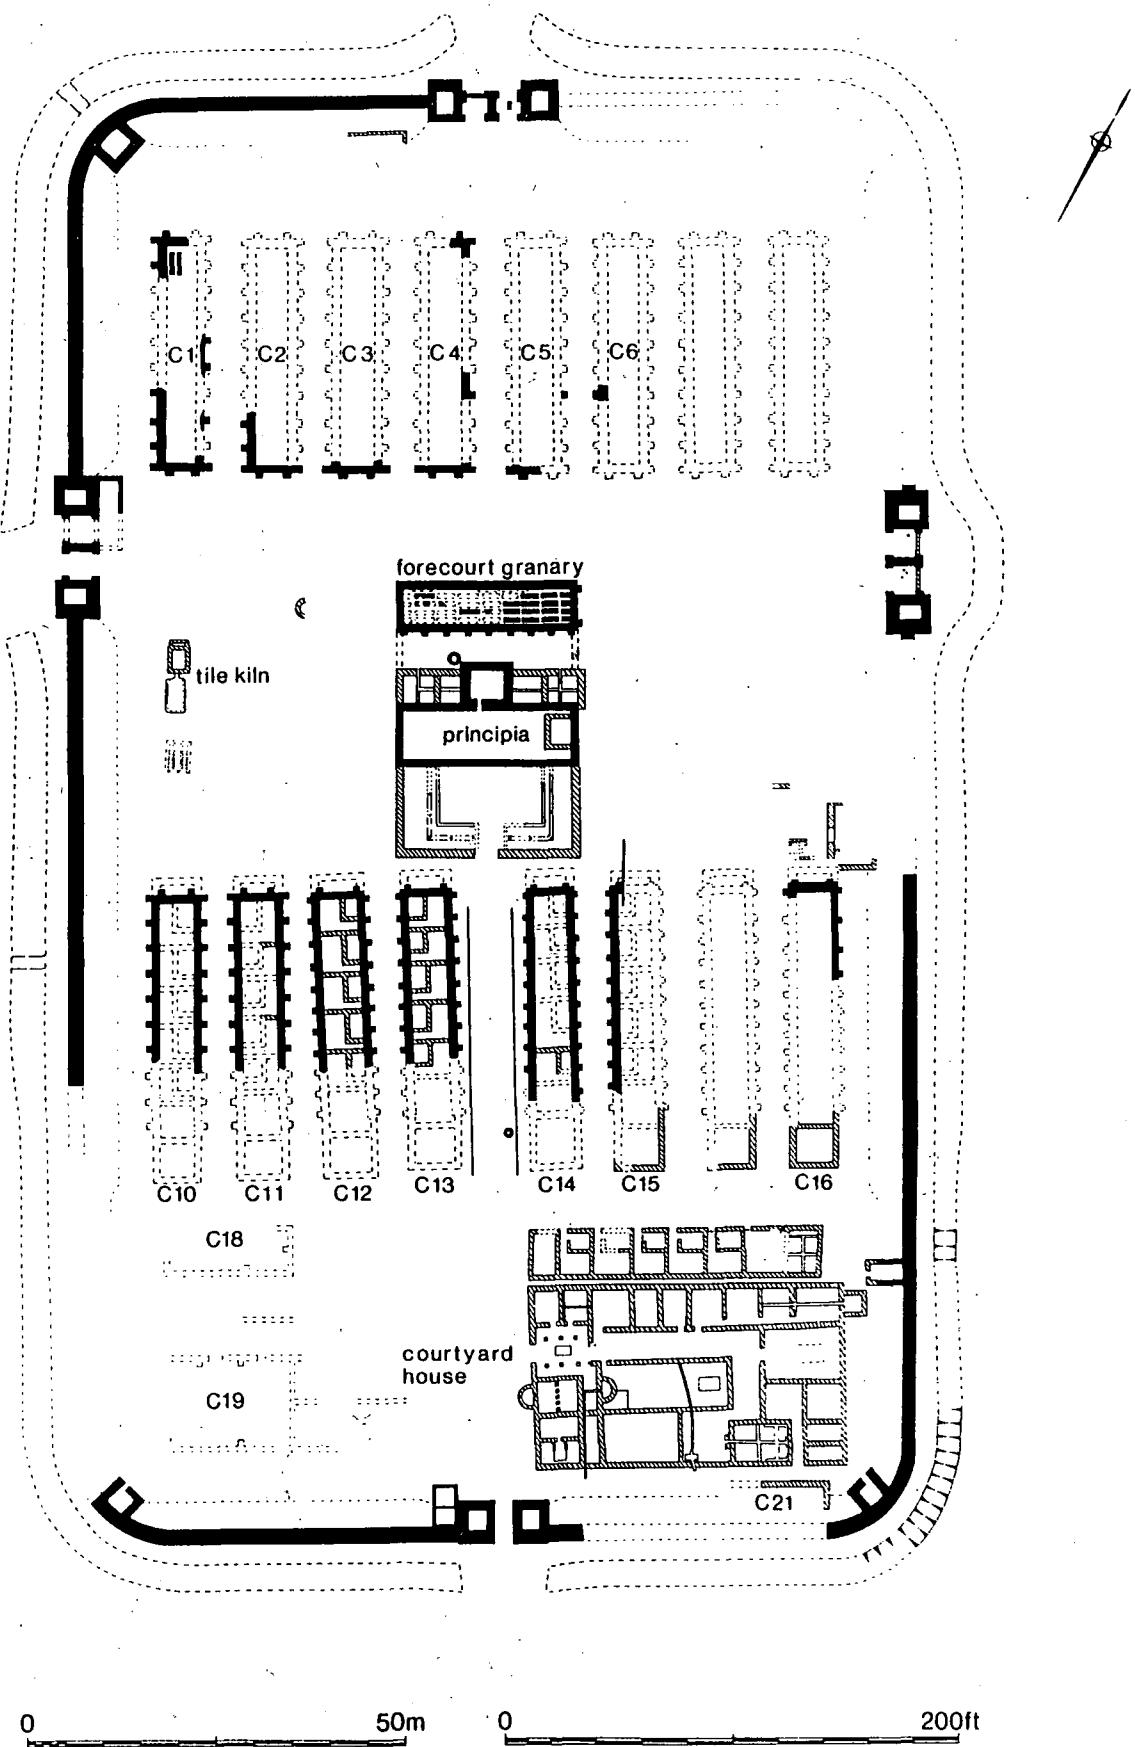

- table 5 Canid gnawing  
table 6 Sheep/goat fusion data  
table 7 Pig fusion data  
table 8 Butchery  
table 9 fragment counts as recorded  
table 10 Pentages of the main domesticates across the site  
table 11 Species by location & fragment count  
appendix 1 List of catalogued zones & abbreviations  
appendix 2 Measurements taken (after von den Dreisch 1976)  
appendix 4 Cattle, counts of identified skeletal elements  
appendix 5 Sheep/goat, counts of identified skeletal elements  
appendix 6 Pig, counts of identified skeletal elements  
appendix 7 Cattle - counts of zones  
appendix 8 Sheep/goat - counts of zones  
appendix 9 Pig - counts of zones  
appendix 10 Grant's wear stages of individual teeth -cattle  
appendix 11 Carcase weights for Dexter cattle

Methods of Cutting Beef Forequarters

figure 20 Methods of cutting up beef forequarters  
(after Gerrard 1945)

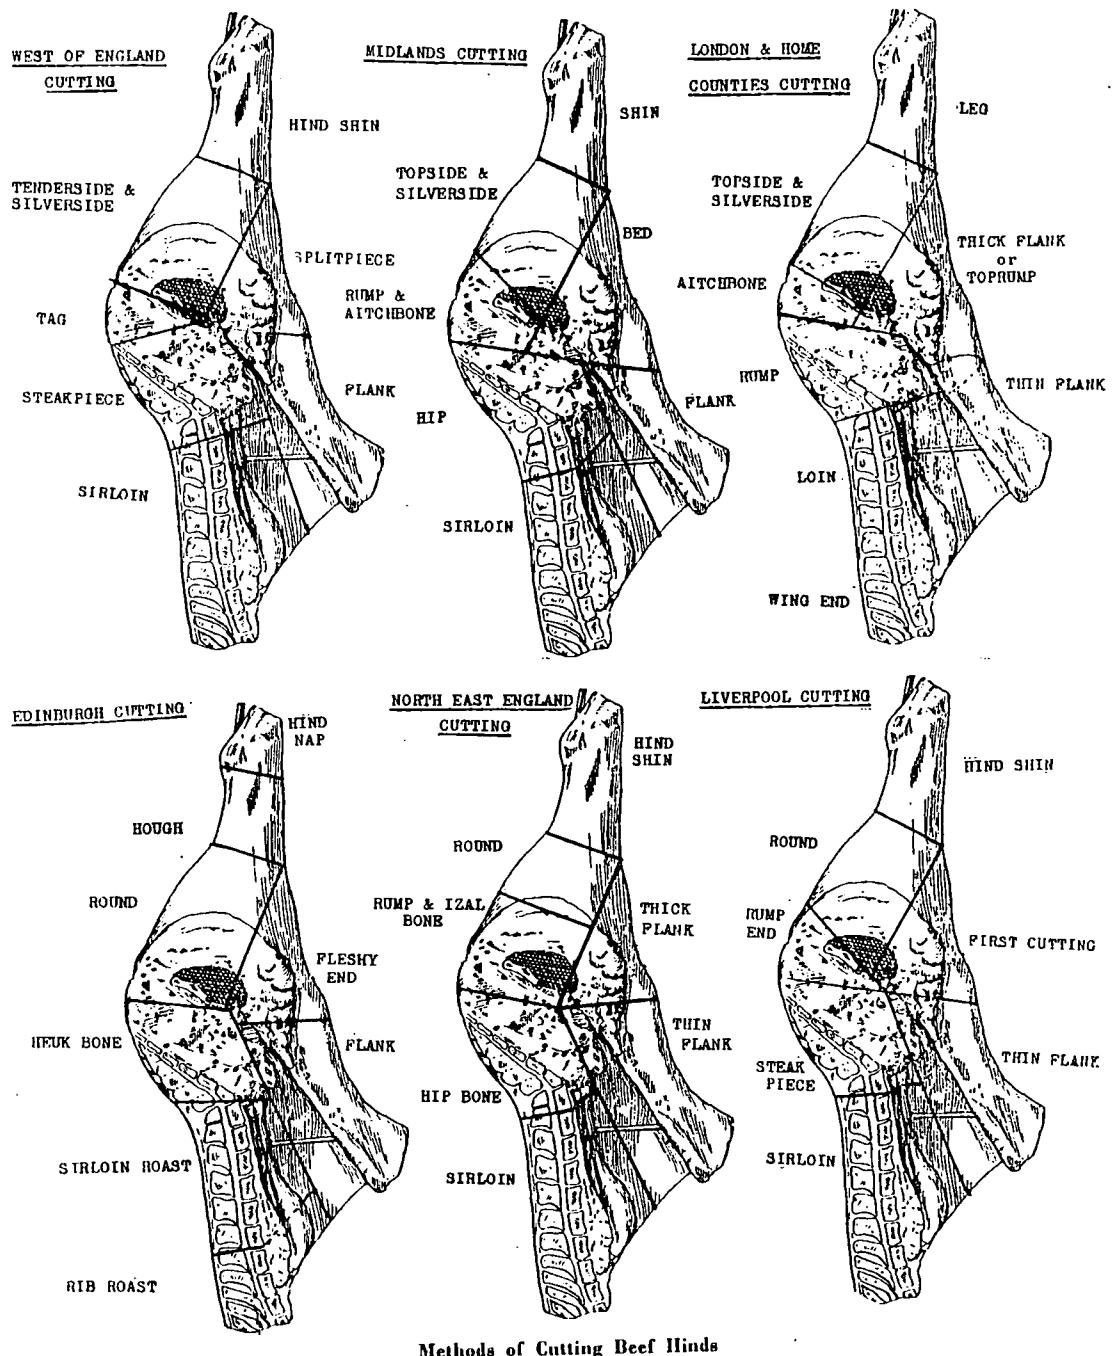

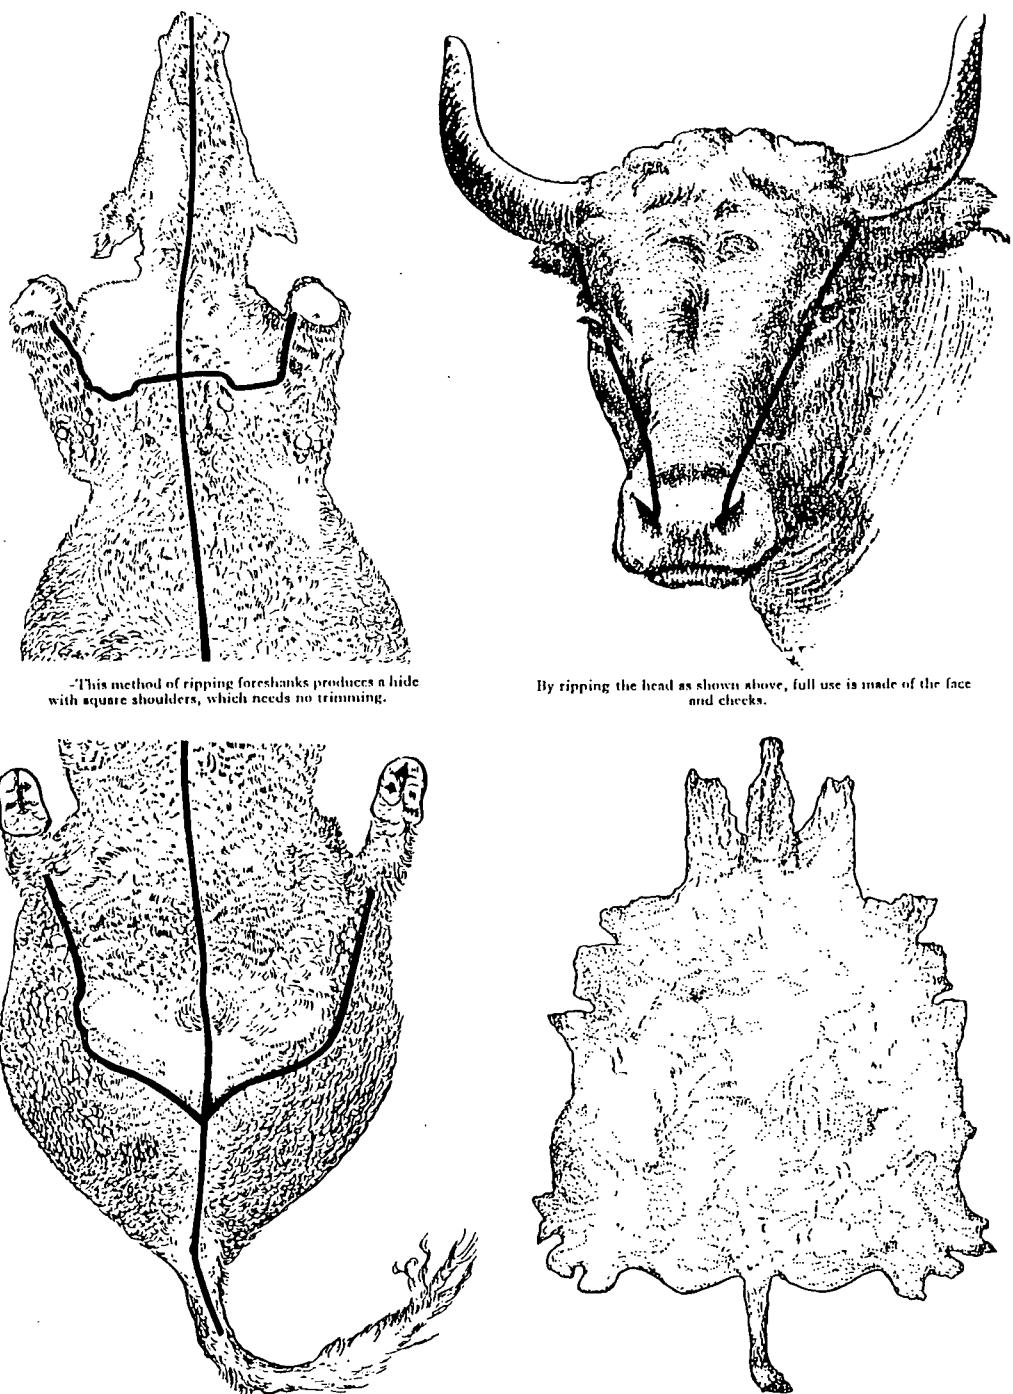

figure 21 Methods of cutting up beef hindquarters  
(after Gerrard 1945)

-This method of ripping foreshanks produces a hide with square shoulders, which needs no trimming.

By ripping the head as shown above, full use is made of the face and cheeks.

-Note the slight curve in the rip from the shanks to the centre line. Remember the butt is the most valuable part of the hide.

This is a drawing of the actual hide, ripped.  
No trimming was necessary. Result, a considerable saving in leather.

## Appendix 1

### List of catalogued bone zones for abundance and fragmentation analysis

#### **Scapula**

1. Supraglenoid tubercle
2. Glenoid cavity
3. Origin of the distal spine
4. Tuber of spine
5. Posterior of neck with foramen
6. Cranial angle
7. Caudal angle

#### **Humerus**

1. Head
2. Greater tubercle
3. Lesser tubercle
4. Intertuberal groove
5. Deltoid tuberosity
6. Dorsal angle of olecranon fossa
7. Capitulum
8. Trochlea
9. Radial fossa

#### **Radius**

1. Medial half of proximal epiphysis
2. Lateral half of proximal epiphysis
3. Posterior proximal ulna scar and foramen
4. Medial half of distal epiphysis
5. Lateral half of distal epiphysis
6. Distal shaft

#### **Ulna**

1. Olecranon tuberosity
2. Trochlear notch
3. Lateral coronoid process
4. Distal epiphysis

#### **Metacarpus**

1. Medial facet of proximal articulation. MC 3.
2. Lateral facet of proximal articulation. MC 4.
3. Medial distal condyle. MC 3.
4. Lateral distal condyle. MC 4.
5. Anterior distal groove and foramen

#### **First Phalanx**

1. Proximal epiphyseal junction
2. Distal articular facet

**Innominatae**

1. Tuber coxae
2. Tuber sacrale & scar
3. Body of ilium with dorso-medial foramen
4. Iliopubic eminence
5. Acetabular fossa
6. Symphyseal branch of pubis
7. Body of ischium
8. Ischiatic tuberosity
9. Depression for medial tendon of rectus femoris
0. Ischial tuberosity

**Femur**

1. Head
2. Trochanter major
3. Trochanter tertius
4. Supracondyloid fossa.
5. Distal medial condyle
6. Lateral distal condyle
7. Distal trochlea

**Tibia**

1. Proximal medial condyle
2. Proximal lateral condyle
3. Intercondylar eminence
4. Proximal posterior nutrient foramen
5. Medial malleolus
6. Lateral aspect of distal articulation
7. Distal pre-epiphyseal portion of the diaphysis

**Calcaneum**

1. Calcaneal tuber
2. Sustentaculum tali
3. Processus anterior

**Metatarsus**

1. Medial side of proximal facet. MT 3.
2. Lateral side of proximal facet. MT 4.
3. Medial distal condyle. MT 3.
4. Lateral distal condyle. MT 4.
5. Anterior distal groove and foramen

**Mandible**

1. Symphyseal surface
2. Diastema
3. Lateral diastemal foramen
4. Coronoid process
5. Condylar process
6. Angle
7. Anterior dorsal ascending ramus posterior to M3
8. Mandibular foramen

**Skull**

1. Paroccipital process
2. Occipital condyle
3. Intercornual protuberance or position of such
4. External acoustic meatus
5. Frontal sinus
6. Ectorbitale
7. Entorbitale
8. Temporal articular facet
9. Facial tuber
0. Infraorbital foramen

**Vertebra**

1. Spine
2. Anterior epiphysis
3. Posterior epiphysis
4. Body of centrum
5. Neural arch
0. One side only ie split

**Other**

1. Whole bones of phalanx 2, phalanx 3, carpals, tarsals, patella.

## List of Anatomical Abbreviations

|      |                     |              |                   |
|------|---------------------|--------------|-------------------|
| Skl  | Skull               | Mal          | Lateral malleolus |
| Hc   | Horn core           | Mt           | Metatarsus        |
| Inc  | Premaxilla          | Mp           | Metapodial        |
| Jaw  | Mandible            | Ph 1         | 1st phalanx       |
| Max  | Maxilla             | Ph 2         | 2nd phalanx       |
| Ocip | Occipital           | Ph 3         | 3rd phalanx       |
| Par  | Parietal            |              |                   |
| Temp | Temporal            |              |                   |
| Zyg  | Zygomatic           |              |                   |
| Lac  | Lacrimal            |              |                   |
| Frnt | Frontal             |              |                   |
| Vc01 | Atlas               |              |                   |
| Vc02 | Axis                |              |                   |
| Vc   | Cervical vertebra   |              |                   |
| Vt   | Thoracic vertebra   |              |                   |
| VL   | Lumbar vertebra     |              |                   |
| Vsa  | 1st sacral vertebra |              |                   |
| Vsb  | Sacrum frag         |              |                   |
| Vx   | Indet vertebra      | Teeth        |                   |

## Appendix 2. Measurements taken (after von den Dreisch 1976)

| element     | meas.<br>no. | measurement                                                   |
|-------------|--------------|---------------------------------------------------------------|
| Femur       | 3            | Bd - greatest breadth distal end                              |
|             | 6            | greatest depth distal end                                     |
| Horn core   | 1            | least (dorso-basal) diameter horn base                        |
|             | 2            | greatest (oro-aboral) diameter horn base                      |
| Humerus     | 5            | BT - greatest breadth trochles                                |
|             | 10           | LT - length trochlea                                          |
| Scapula     | 2            | SLC - smallest length of collum scapulae                      |
|             | 3            | thickness of neck                                             |
|             | 4            | GLP - greatest length processus articularis (glenoid process) |
|             | 5            | BG - breadth of glenoid cavity                                |
|             | 6            | LG - length of glenoid cavity                                 |
| Tibia       | 7            | Bd - greatest breadth distal end                              |
|             | 8            | Dd greatest depth distal end                                  |
| Radius      | 1            | GL - greatest length                                          |
|             | 2            | Bp - greatest breadth proximal end                            |
|             | 3            | proximal depth                                                |
|             | 6            | Bd - greatest breadth distal end                              |
|             | 8            | BFp - greatest breadth facies art. prox.                      |
|             | 9            | BFd - greatest breadth facies art. distal                     |
| Metapodials | 1            | GL - greatest length                                          |
|             | 2            | Bp - greatest breadth proximal end                            |
|             | 3            | Dp - greatest depth proximal end                              |
|             | 4            | SD - smallest breadth diaphysis                               |
|             | 5            | 90 degrees to 4.                                              |
|             | 6            | Bd - greatest breadth distal end                              |
|             | 7            | minimum medial depth distal condyle                           |
|             | 8            | maximum medial depth distal condyle                           |

The Dexter and the Dexter Cross makes a good beef animal whether it is kept as a beef i.e. (entire) or a steer i.e. (castrated).

It yields high quality small joints of meat with a good proportion of meat to bone.

A mature Dexter Bull or Steer can reach nine hundredweight or more in three years, but as an animal intended for beef would not be kept for that length of time the weight to aim for is six to six and a half hundredweight.

Animals kept entire on an intensive feeding system in pens from the time they are weaned will reach a satisfactory killing-out size at twelve months old.

Here is some information from the files of one of our members on animals slaughtered.
