An Explanatory Note

These lists are made up of patterns discussed in the text, or mentioned as being relevant to the study, while within the bounds of Northumbria (at its widest extent). A Southern Deiran Group consisting of works at Thornhill, Kirkburton, Dewsbury, Leeds (Church), Birstall, Rastrick and also the Walton Cross are not discussed in the text but added here for reference.

The lists were made out to be used in conjunction with the text, so that if Anglian interlace occurs at a place, then only the name of the place appears; the text numbers or distinguishing names are used when there is more than one interlace at a centre. Most works are illustrated in the plates, but if not, an abbreviated reference is given: W.G. Collingwood (C), J. R. Allen (A), W. Greenwell (G) and C.C. Hodges (H) with the appropriate date of publication. Lost works, which appear in Stuart, are noted.

The illustrations show two complete registers of pattern if the register comprises two pattern units, or one and a half registers when it is made of four units, except in the case of ring knots and similar designs when one register is sufficient. Any design with one register of pattern is entered or a part, indicated (Part), if it appears to be forming that pattern. A terminal (T) will often be a clear half register of a design. Twists (Twist), Breaks (Br), small variations (Var) or irregularities (Irreg) may occur without vitally altering the design to the extent of warranting a separate design. A damaged area or broken edge may leave doubt as to the pattern intended and this is noted (?). Very few designs have been omitted and these are mostly terminals which do not make practicable repeated patterns.
